Potential
influence

PUBLIC RELATIONS

VS

PUBLIC AFFAIRS

- Brand's connection to public
- Push campaigns
- Campaign & promote
- Aim to control the conversation
- Direct influence

- Issues that concern the public directly
- Pull constituents/grassroots/influencers
- Conversations + inform
- Coalitions to enhance credibility
- Persuade stakeholders, often indirectly

6-step digital advocacy plan

1. Objectives

- 3 main advocacy goals
- 3 main SMART communication objectives ('success')

2. Audience & Intelligence

- Stakeholder, position, audience mapping
- Identify policy influencers, journalists, multipliers
- Public sentiment analysis

3. Define channels

- Social media (which?)
- Direct email outreach
- Campaign landing page
- Traditional media

**What could be the 3 main
comms objectives for MME?**

The Best Government Relations Tracking and Analytics Tools for European Public Affairs

Last updated 27 January 2021

As the public and government affairs function has become more professional and data-driven, a number of companies and tools have appeared on the European scene.

Their mission: to help lobbyists, regulatory managers and corporate affairs professionals track, monitor, analyze, log events and trends, and/or connect and engage with policymakers at EU institutions, government officials at local or national level, and stakeholders at large.

Below is a non-comprehensive list of tools/companies offering digital public affairs tools of some kind. If you run a service that should be on this list, let us know and we'll update it.

Important: Tools are listed alphabetically. The blurbs were given to us or taken from the respective companies' websites, without any comment or evaluation from us. We only include social media tracking tools that have links to government or corporate affairs, or Europe.

RURAL BROADBAND: Ask Congress to expand rural access to broadband service

Share This Article

Rural broadband is a critical pathway to global markets for agriculture and other industries. Farmers and ranchers depend on broadband just as they do highways, railways and waterways.

While most Americans take broadband for granted, **26.4 percent** of rural Americans **lack broadband access** compared to only **1 percent** of urban Americans, according to the Federal Communications Commission. However, an asterisk must be used alongside these figures because the current data and maps used to assess broadband coverage are flawed and fail to accurately determine broadband access.

Agriculture requires mobile broadband coverage, which **allows farmers to be more efficient, economical and environmentally responsible**. Broadband connectivity allows farmers and ranchers to make **data-driven business decisions** and improves sustainability by allowing farmers to apply less water, protect soil health, plant seeds to achieve optimal yield and reduce environmental impact.

Ask your members of Congress to support:

- **H.R. 3369**, the [Broadband for Rural America Act](#). This legislation will provide additional investments in USDA rural broadband programs while prioritizing rural areas most underserved.
- **S. 1695** and **H.R. 3193**, the [Eliminating Barriers to Rural Internet Development Grant Eligibility \(EBRIDGE\) Act](#). This legislation removes hurdles for broadband projects, including difficult last-mile efforts that often delay rural

New research says research is valuable; researchers glad

Associated Press

UW-Madison Chancellor Donna Shalala and researchers are pleased with a new report that reaffirms the value of research that may not pay off until years after taxpayers have paid for it.

Shalala said the report by the National Science Board Commission on the Future of the National Science Foundation reinforced the foundation's commitment to so-called basic research in science and the social sciences.

"You cannot have technology unless you have basic research," said

short-term research should be done to solve specific, immediate problems such as AIDS or the economy.

The report said improving the industrial strength of the United States must be a priority, but maintained that changing the National Science Foundation would not accomplish such goals.

"Failures in the marketplace have not been the result of slow transfer of academic science to industry," the report said. "In fact, American firms have been the first to commercialize virtually all innovative products but have lost market share to competitors with

neering. The foundation doles out about \$2.5 billion for research projects.

The report pleased administrators and professors at UW-Madison, where an estimated 80 percent of the research could be considered basic or long-term.

John Wiley, dean of the graduate school, said the attempt to distinguish between basic research and applied research was "wrong-headed and counterproductive."

"If people 100 years ago had worked only on how to make better horseshoes, who would have done the work leading to cars?" Wiley
